VIPER JR (12"-14")	JL3-4SF-TF	JLELR-TF	N/A

* Non Elevating Rigging Typically Not Used on Reclining Wheelchairs.

The **WASR**- Right Limb Support & **WASL**- Left Limb Support will attach to all Wheelchairs except for the Cougar & The Sentra HD XW (26" x 30").

The Viper Jr. (12"-14") will support either the **WASR** or **WASL**, but not both at the same time.

Articulating Leg Rests extend as they are elevated. This is an important feature for taller users and those needing to change the angle of the leg rests from time to time.

When the knee is extended (straightened), the leg length from the base of the spine to the bottom of the foot increases, so a non-articulating elevating leg rest (with its length adjusted while in the lowered position) will be too short when elevated. Articulated leg rests will adjust in length when elevated and lowered.
